email_list.js x

```
1 var $ = function(id) {
2   return document.getElementById(id);
3 };
4
5 var joinList = function() {
6   var email_address1 = $("#email_address1").value;
7   var email_address2 = $("#email_address2").value;
8   var isValid = true;
9
10  if (email_address1 === "") {
11    $("#email_address_error").firstChild.nodeValue = "This field is required.";
12    isValid = false;
13  } else {
14    $("#email_address_error").firstChild.nodeValue = "";
15  }
16  if (email_address1 !== email_address2) {
17    $("#email_address2_error").firstChild.nodeValue = "This entry must equal first entry.";
18    isValid = false;
19  } else {
20    $("#email_address2_error").firstChild.nodeValue = "";
21  }
22  if ($("#first_name").value === "") {
23    $("#first_name_error").firstChild.nodeValue = "This field is required.";
24    isValid = false;
25  } else {
26    $("#first_name_error").firstChild.nodeValue = "";
27  }
28  if (isValid) {
29    $("#email_form").submit();
30  }
31 };
32
33 window.onload = function() {
34   $("#join_list").onlick = joinList;
35   $("#email_address1").focus();
36 };
37
```

Line 1, Column 1

Console What's New x

Highlights from the Chrome 71 update

Hover over a Live Expression to highlight a DOM node
Hover over a result that evaluates to a node to highlight that node in the viewport.
Store DOM nodes as global variables
Right-click a node in the Elements panel or Console and select "Store as global variable".
Initiator and priority information now in HAR imports and exports
Get more context around what caused a resource to be requested and what priority the browser

new
